“We have a very long-standing relationship with people in the area—we’ve grown up with the families here,” said Brian Jewell, MD, a sports medicine specialist. “We live in the area, we raise our own families here; there are few places that I can go where I don’t see someone whom we’ve treated.”

With a practice that has spanned generations, it’s not surprising that everyone from high school athletes with knee injuries to senior citizens with arthritis issues has at one time used the services at Tri-State. In fact, the practice’s newest doctor, Michael Pagnotto, MD, was a patient of Tri-State as a high school athlete before returning to specialize in hip and knee replacements after completing his joint reconstruction fellowship at The Mayo Clinic.

“Dr. Failla, Dr. Jewell and Dr. Langhans took care of me back in 1995 when I hurt my knee as a football player at North Allegheny (NA),” Dr. Pagnotto explained. “I told them then that I wanted to be an orthopaedic surgeon, and they told me to come back when I was finished with my training and they’d give me a job. Fifteen years later, here I am.”

Dr. Jeffrey Kann also had experience with the practice before he joined it as a knee, foot and ankle specialist. His brother, Steven Kann, MD, is a hand and upper extremity specialist at Tri-State. “It just seemed like a really good fit,” he said. “What I like is that all of us are from this area, and even though we may have done our training elsewhere, we all returned to this community to use our expertise where we grew up and where we wanted to raise our own families.”

In addition to having such a close-knit group of physicians, what sets Tri-State apart from other practices is this level of expertise. “What’s truly unique about Tri-State is that we have physicians who subspecialize in each joint and part of the body, as well as providing very good general orthopaedic care,” said Dr. Kann.

Tri-State’s physicians have advanced fellowship training in a myriad of areas including hand, finger, elbow, wrist and upper extremity surgery (including minimally invasive surgery for carpal tunnel and trigger finger); foot and ankle surgery; arthroscopic surgery of the shoulder, elbow, knee and hip; knee and shoulder reconstruction; total joint replacement and revision surgery of the knee and hip; and spine surgery.
Its physicians use state-of-the-art surgical techniques and equipment, including mini-incision and micro-surgery to improve patient outcomes and reduce hospital stays and recovery time.

Before considering any type of surgery, however, Tri-State physicians treat patients with the most conservative methods possible. “A good surgeon can take care of 80 to 90 percent of cases non-surgically,” said Dr. Jewell, adding that he is a huge believer in conservative modalities such as bracing, physical therapy and the use of biologics to improve a patient’s function, which in turn, prevents the need for surgery.

“For many of the younger patients we see with sports injuries, as well as older patients with arthritic problems, surgery is a last resort,” agreed Dr. Mark Langhans, a specialist in arthroscopic and reconstructive surgery of the knee and shoulder. “Quite often, there are other options, ranging from medications to viscosupplementation (injecting a gel-like substance into the joint) to physical therapy.”

Physical therapy and hand therapy services are offered at each Tri-State office. “We began providing physical therapy services almost seven years ago as a way to assure that our patients—both surgical and nonsurgical—had good end results,” said Dr. Langhans.

“One advantage of providing physical therapy on-site is that we get constant feedback about our patients,” added Dr. Pagnotto. “There is coordination and continuity between the physicians and the physical therapy team, which enables us to find the best treatment approach and to adjust patients’ care as needed.”

This multidisciplinary approach has resulted in the practice’s surgeons working with numerous sports teams throughout the area, including the NA and Seneca Valley high school sports teams. The doctors and staff at Tri-State further serve the community by providing educational presentations to groups and organizations on topics ranging from sports injury prevention to arthritis management.

In addition to helping a number of local nonprofits, for the past decade Tri-State has been working with the Make-A-Wish Foundation to help children’s dreams come true. “What’s amazing about Tri-State is not only how generous they are, but how fun they are,” said Barbara Becker, vice president and director of development for the Make-A-Wish Foundation of Greater Pennsylvania and Southern West Virginia. “Everything they do, from their annual holiday card where the doctors dress to fit a theme, to the generous donation that they give us every year, reflects their good, kind hearts.” Since 2001, Tri-State has donated more than $70,000 to the Make-A-Wish Foundation.

According to Becker, these donations have helped a number of local children with life-threatening medical conditions to realize a special wish. “The number one wish continues to be to meet Mickey Mouse at Disney World in Orlando,” she said, “and donations like this make it possible. It gives families a chance to take time out from hospital stays and medical treatments, and it allows these children to be normal kids again.

“We are so grateful to have Tri-State’s support and their vote of confidence in the work that we do,” she added.

As Tri-State Orthopaedics approaches its fourth decade serving the North Hills and surrounding communities, there is no doubt that it will continue keeping its patients, and those organizations it supports, in the game.
